Overview of Hydrogen Projects in the Netherlands

Peter de Laat for TKI Nieuw Gas

Spring 2020
Introduction

All around the world hydrogen activities are developing fast and new projects are announced on a weekly basis. Dutch industry, research institutions, consultants, NGO's and governments also take part in these developments and are jointly working on a large range of projects, aimed at realizing the potential role that hydrogen can play in the energy transition to a carbon neutral energy system in 2050. These projects not only focus on the Netherlands, but also seek to connect to our neighboring countries and the North Sea region.

In this slide deck we present an overview of Dutch pilot and demonstration projects on hydrogen which were found in the public domain. We hope that this overview inspires to continue to work on the realization of these projects and to start new ones. Of course this overview is not complete, it is just a picture of what is happening at the moment. If your project is not listed in this overview, or if the information we used is not accurate, please let us know so we can keep this overview up-to-date. Comments can be sent to office@tki-gas.nl.
Explanation of the information box

• Category  What is the main subject of the project in the hydrogen chain?

• Capacity  What is the size of the project in MW, tons H₂/hour or trucks build?

• Process phase  In which phase is the project:  
  concept  (idea development)  
  feasibility study  (first design)  
  FEED-study  (business case)  
  FID  (investment decision)  
  execution  (implementation, building)  
  commissioning  (test run)

• Project costs  The amount of subsidy or investment involved.

• Contact  Here, more information on the project or initiative is given.
Overview of Hydrogen Projects in the Netherlands

Overview

Introduction

Numerous projects are being developed that turn hydrogen into a source of energy. Dutch industry, research institutes, consultants, NGOs and governments also take part in these developments and are publicly aware of a large range of projects. More than funding, the concern is what hydrogen can play in the energy transition, or a circular, circular energy system in 2050. These sustainability goals focus on the Netherlands, but also seek to compete with other countries.

In this public deck we present an overview of Dutch pilot and demonstration projects on hydrogen which were found in the public domain. We hope that this overview is useful to work on the evaluation of these projects and in what new ones. If more than overview is not clear about any of the projects described in this overview of the information we used is not accurate, please let us know and we will keep the overview up-to-date. Comments can be sent to TKH@ntv.nl.

Explanation of the information box

- Company: Who is the main subject of the project on the hydrogen chain?
- Capacity: What is the role of the project in the MCE market?
- Process phase: In what phase is the project in, conceptual feasibility study, R&D? Why?
- Project code: The amount of subsidy or investment involved.
- Contact: More information on the project or initiative given.

**Production VIII**

**Production IX**

**Production X**
Realisation of a 20 MW Electrolyser in Delfzijl

Operated by Nouryon and Gasunie, it will provide 3,000 tons of green hydrogen per year, reducing CO2 emissions by up to 27,000 tons per year in combined activities with BioMCN.

Contact: info@hinicio.com

Category: production of hydrogen
Capacity: 20 MW > 60 MW
Process phase: FID in 2020
Project period: 2020 -
Project costs: 16 M subsidy

Partners:
Hydrogen Delta

Designing a Gigawatt Electrolysis Plant for Zeeland

Aims to design a GW hydrogen factory at 3 times lower costs than the current design. It should consider the capturing and delivery of hydrogen, heat and oxygen in a way that goes hand in hand with the operational strategy of the large-scale facility.

Building a 250 MW Electrolysis Plant in Port of Rotterdam

The new factory will be able to produce 45,000 tons of green hydrogen annually. Because the hydrogen is produced from water with sustainable electricity, CO₂ emissions can decrease by 350,000 tons annually. BP will use the green hydrogen to desulphurise products.

Category: production of H₂
Capacity: 250 MW
Process phase: FEED-study
Project period: 2019 – 2022 (FID)
Project costs: 225 - 300 M
Contact: hgj.regeer@portofrotterdam.com
CCUS Infrastructure for Blue Hydrogen in Port of Rotterdam

Transfer of grey hydrogen production in the Port of Rotterdam into blue with CCUS into the North Sea bottom. Shell, ExxonMobil, Air Liquide and Air Products committed to this phase for creating a CO₂ infrastructure.

Category: production of blue H₂
Capacity: 2,5 million ton CO₂ per year
Process phase: FEED-study
Project period: 2020 – 2023
Project costs: >20 M
Contact: r.m.de.vries@gasunie.nl
Building a 100 MW Hydrogen Plant for Westereems Wind Farm

The 100-megawatt capacity plant would be located on the site of the RWE-Eemshaven power plant and will be supplied with power from the adjacent wind farm Westereems owned by innogy.

Category: production of green H₂
Capacity: 100 MW
Process phase: feasibility-study
Project period: 2019 -
Project costs: unknown
Contact: sarah.knauber@innogy.com

Partners:
Building a 100 MW Green Hydrogen Plant as part of a Hub

Building a 100 MW hydrogen powerplant on the Hemwegsite as part of a fossil free hub (production, storage and distribution) for providing green electricity, heating and fuels for Amsterdam Metropool Region.

Category: production of green $H_2$
Capacity: 100 MW

THRUST

Towards Hydrogen-based Renewables Used for Ship Transportation

Enabling a shipping industry without harmful emissions, The Rotterdam water taxi in 2020 is a beautiful calling card for the application of hydrogen. This synthesis a commercial, emission-free solution for inland shipping, which can be scaled up towards the mainline sector.

Category: deployment in mobility
Capacity: scale up
Phase: planning
Project period: 2020
Project costs: unknown
Contact: https://thrust-amer.org/
Building 6 Hydrogen-powered Garbage Trucks

The trucks will be operating in different locations, so that municipalities and collection companies can become acquainted with hydrogen technology. A unique aspect is that service companies are also involved in the demonstration project.

Category: deployment in mobility
Capacity: 6 trucks
Process phase: execution
Project period: 2020 -
Project costs: unknown
Contact: stefan.neis@waterstofnet.eu
Rhine Hydrogen Integration Network of Excellence

Aiming for 10 ships running on hydrogen in 2030 on the Rhine between Rotterdam - Genoa, fueled by (at least) three hydrogen filling stations and three consortia of private parties.

Category: deployment in mobility
Capacity: 10 ships and 3 filling stations
Process phase: feasibility-study
Project period: 2020 – 2030
Project costs: unknown
Contact: hgj.regeer@portofrotterdam.com

Partners: the Province of South Holland, the State of North Rhine-Westphalia, Ministry of Infrastructure and Water Management, Province of Gelderland, Port of Rotterdam Authority, Duisburg Port Authority RhineCargo, BCTN, EICB, Nouryon, Covestro, Air Products, Future Proof Shipping, HTS Group, NPRC, AirLiquide and Koedood.
Development of a Green Hydrogen Economy in the Northwestern NL

The realization of a first hydrogen gas station in Alkmaar, two hydrogen trucks, a hydrogen sweeper, the development of an integrated storage, transport and distribution system for hydrogen. It will be combined with a 4.8 MW hydrogen mill.

System-Based Solutions for H₂-Fueled Water Transport in NW Europe

Development of a hydrogen supply chain for shipping (retrofit) inland vessels. A new hydrogen powered port vessel will be built in Amsterdam. In Belgium, a H₂ refueling system suitable for open sea operation, will be developed and tested.

Category: deployment in mobility
Capacity: 1 port vessel
Process phase: FEED-study
Project period: 2019 - 2022
Project costs: 7.2 M total EU project
Contact: Jan.Egbertsen@portofamsterdam.com

Partners:
Refuse Vehicle Innovation and Validation in Europe

Integrating fuel cell powertrains into 15 vehicles and deploying them in 8 sites across Europe. An additional task will explore the potential for ‘Waste-to-Wheel’ business models where the fuel cell trucks are combined with more affordable green hydrogen sourced from waste plants.

Category: deployment in mobility
Capacity: 15 waste trucks
Process phase: execution
Project period: 2019 - 2021
Project costs: 8.7 M total EU project
Contact: stefan.neis@waterstofnet.eu
Designing and Building a Hydrogen Filling Point at Existing Gas Stations

Designing and building 5-10 hydrogen fueling stations in Amsterdam, Utrecht, Zwolle and Leeuwarden. At the locations it will be possible to refuel hydrogen with both 700 bar (passenger cars) and 350 bar (larger vehicles such as buses).

Category: deployment in mobility
Capacity: 350/700 Bar filling stations
Process phase: FEED-study
Project period: 2019 -
Project costs: DKTI + BENEFIC subsidy
Contact: info@orangegas.nl
Designing and building a Hydrogen Filling Point at Existing Gas Stations

After a long preparation, we can finally report that the installation of our 350/700 Bar hydrogen filling point is ready. At this point, anyone can help with testing by refueling.

Category: deployment in mobility
Capacity: 350/700 Bar filling point
Process phase: commissioning [in operation]
Project period: 2019 - 2020
Project costs: unknown
Contact: willem.frens@tno.nl

Partners:
SkyNRG

Green Hydrogen for Producing Sustainable Aviation Fuel (SAF).

Use of hydrogen from to refine frying fat into sustainable kerosene and biopropane in the SkyNRG initiative in Delfzijl. From 2022, the plant will annually produce 100,000 tons of SAF, as well as 15,000 tons of bioLPG, as a byproduct. CO₂ reduction would be 270,000 tons a year.

Contact: info@skynrg.com

Category: deployment in mobility
Capacity: 40 MW electrolyser capacity
Process phase: execution
Project period: plant open in 2022
Project costs: unknown

Partners:
50 Fuel Cell Electric Buses

Towards Clean Public Transport with Hydrogen in the Netherlands

Demonstration of 50 hydrogen buses on Dutch public transportation. This is part of JIVE, JIVE 2 subsidies and part of a greater European project.

Category: deployment in mobility
Capacity: 50 buses
Process phase: execution
Project period: 2018 - 2020
Project costs: 25 M total EU project
Contact: stefan.neis@waterstofnet.eu

Partners:
H2-SHARE

Hydrogen Solutions for Heavy-duty (27 tons) Transport in NW Europe.

For large heavy-duty vehicles which travel longer distances, electric trucks with a hydrogen fuel cell range extender are possible zero-emission solutions. In the EU, such vehicles are not yet commercially available but have enormous potential. ‘H2-Share’ aims to unlock this potential.

- **Category:** deployment in mobility
- **Capacity:** 1 truck, 1 mobile filling station
- **Process phase:** commissioning
- **Project period:** 2020 - 2023

**Partners:**
Hydrogen Trains as a Sustainable Alternative for Diesel Trains

In March 2020 train rides are made with a Coradia iLint-hydrogen train, to test whether this type of train can run in the timetable. The province wants to make rail transport in the north of the Netherlands more sustainable, which is currently still largely carried out by diesel trains.

Category: deployment in mobility
Capacity: 1,000 km per filling
Process phase: commissioning
Project period: 2020
Project costs: unknown
Contact: info@prorail.nl
Diesel to PFCEV

Building a Retrofit for a 30 kW Plug-in Fuel Cell Electric Vehicle

The project includes R&D towards an experimental 30kW fuel cell range extender system, which will be tested in a PFCEV city truck. After success, a production line is designed for retrofit conversion kits and a more generic application than vehicles.

Category: deployment in mobility
Capacity: 30 kW
Process phase: feasibility-study
Project period: 2018 - 2020
Project costs: TSE 460 k
Contact: sales@newelectric.nl

Partners:
Incentive package for 90 Additional Hydrogen Cars in the Arnhem Region

With a 50% discount on refueling and much more benefits, like hydrogen car introductory training, pick-up service and replacement transport. This promotion is intended for people who live and/or work a maximum of 30 kilometers from the center of Arnhem.

Category: deployment in mobility
Capacity: 90 cars
Process phase: commissioning
Project period: 2020 -
Project costs: 1 M
Contact: www.h2-drive.nl
Energy Points

Refueling Stations with Hydrogen From and For the Future

Energy Points are modern hydrogen fueling stations with groundbreaking design. Holthausen is currently working on the realisation of 2 hydrogen filling stations in Groningen and Amsterdam. These 2 projects are being worked out and realised in collaboration with the municipalities.

Category: deployment in mobility
Capacity: 2 refilling stations
Process phase: execution
Project period: 2020-2020
Project costs: DKTI-subsidy + 500 k A'dam
Contact: lead@holthausen.nl
The Development of a Hydrogen Filling Station in Breda

This filling station will supply green hydrogen to both passenger vehicles (700 bar) and heavy-duty vehicles (350 bar). PitPoint is in discussion with the waste service Breda considering its garbage trucks, which is an important potential customer.

Category: deployment in mobility
Capacity: 1 refilling station
Process phase: FEED-study
Project period: 2020 - 2022
Project costs: Interreg and DKTI-subsidy
Contact: info@pitpoint.nl

Partners:
High V.LO City

Accelerating Integration of Public Hydrogen Bus Transport in Cities

High V.LO City does this by supporting the deployment of hydrogen buses in public transportation and the construction of hydrogen filling stations at the strategic locations Delfzijl and Antwerp by PitPoint.

Contact: info@pitpoint.nl

Project period: 2012 - 2022
Project costs: FCH-subsidy

Category: deployment in mobility
Capacity: 2 refilling stations
Process phase: execution

Partners:
Developing a Hydrogen Filling Station in Roosendaal.

This project is localised near the Rotterdam-Antwerp hydrogen pipeline adjacent to the A17 highway. The next project of H2Point will be a hydrogen refilling station in Oosterhout. The project is subsedised by TDKI and BENEFIC.

**Category:** deployment in mobility  
**Capacity:** 2 refilling stations  
**Process phase:** execution  
**Project period:** 2020 Roosendaal ready  
**Project costs:** 1.5 M per station  
**Contact:** www.h2point.nl

Partners:
To Develop a Hydrogen Filling Station for Maritime and Road Transport

As part of the project, Damen Shipyards will develop a hydrogen ship that will be offered to a pool of potential users. To supply the electrolyser, ENGIE is going to realize a 2.6 MWp solar park locally. The expected maximum capacity will be around 400 kg of green hydrogen.

Category: deployment in mobility
Capacity: 2 refilling stations/ 400 kg H₂
Process phase: FEED-study
Project period: 2019 - 2021
Project costs: 1.4 M DKK
Contact: info@podh.eu
To Develop and Construct 5 Hydrogen Filling Stations in NL

Greenpoint Fuels currently has pending permit applications for 5 hydrogen filling stations. Creating a network of tapping points; the filling stations will be located in Zeewolde, Ede, Bleiswijk, Oude-Tonge and Sliedrecht.

Category: deployment in mobility
Capacity: 5 H₂ filling stations
Process phase: FEED-study / execution
Project period: 2019 - 2023
Project costs: unknown
Contact: info@greenpointfuels.nl

Partners:
Use of 45 Hydrogen Taxi’s for Special Care (WMO) Transportation.

This is the first hydrogen taxi fleet in the Netherlands. 35 Toyota Mirai’s are driving in The Hague and 10 in Ede. “The client requires us to be available 24/7 with our fleet. Due to the large range of the hydrogen car and the fast refueling, Noot Personenvervoer can offer this.”

Category: deployment in mobility
Capacity: 45 H₂ taxi’s
Process phase: commissioning
Project period: 2019 - 2020
Project costs: unknown

Hydrogen Neighbourhood Hoogeveen

100 Newly Built Houses and 430 Existing Houses Connected to Hydrogen

The newly built Nijstad-Oost residential area has been designated as a demonstration project for the application of hydrogen in newly-built houses. The destination plan will soon be brought into execution. Construction is expected to start in 2021. Other houses will be connected later.

Category: deployment in built environment
Capacity: 530 houses
Process phase: FID
Project period: 2020 - 2022
Project costs: TSE 400 k
Contact: Kees Boer, gem. Hoogeveen

Partners:
Power-To-Gas (P2G) Phase II

Power to Hydrogen for Residential Heating of Apartments in Rozenburg

Decentralized integration of wind and solar energy via hydrogen from electrolysis for the heat supply of the built environment. The hydrogen is delivered by the regular natural gas pipelines to the boiler house of the apartment complex where the first hydrogen boilers are tested.

Category: deployment in built environment
Capacity: 500 residential houses
Process phase: execution
Project period: 2018 - 2023
Project costs: unknown
Contact: albert.vandermolen@stedin.net

Partners:
City on 't Haringvliet Switching to Green Hydrogen.

The hydrogen is to be used to heat the 600 houses in the village. The existing gas network can be used for the purpose, so no new network needs to be laid. The four "gas district stations" that still operate on natural gas are being converted and a different gas meter must be installed.

- **Category:** deployment in built environment
- **Capacity:** 600 residential houses
- **Process phase:** FEED-study
- **Project period:** 2018 - 2030
- **Project costs:** unknown
- **Contact:** stadaardgasvrij@gmail.com
Hydrogen Neighbourhood

Pilot Heating with Hydrogen in Neighbourhood Berkeloord, Lochem

At Berkeloord there are relatively old, sometimes even monumental buildings. Residents are looking for sustainable alternatives for natural gas. Since cooking cannot be done with hydrogen; induction would be the most obvious option. In winter 2020/2021 the pilot will be carried out.

Contact: info@lochemenergie.net

Category: deployment in built environment
Capacity: 10 - 15 residential houses
Process phase: FEED-study
Project period: 2020 - 2021
Project costs: unknown
